Kavex®

For over 20 years Kestrel has been manufacturing a full range of PVC-UE roofline, cladding and window finishing system products within the European building and construction industries. High quality products, excellent customer service and a firm grasp of customers' requirements have led to Kestrel maintaining its position as a market leading manufacturer and innovator.

These innovations include Kavex® wood grain effect PVC-UE cladding. Kavex® provides a stylish and effective means to protect and decorate the exterior of homes and other buildings without the need for continual and costly maintenance and decoration.

A lower thermal conductivity than timber, concrete, mineral fibre boards or brick (0.06 W/mK) makes Kavex® a good insulator. It successfully imitates timber with authentic woodgrain look-a-like features and can be installed using traditional wood installation skills, practices and tools. Available in 2 size formats, single plank (150mm) and double plank (300mm) it offers quick and easy installation. Kavex® is completely unaffected by damp, rot, decay, frost and is resistant to attack from insects.

Kavex® is manufactured using Kestrel's environmentally kind PVC-UE stabilisers guaranteed to give the best colour resistance. In addition to our standard warm white, Kestrel offers the colour options of cream and sand including a comprehensive range of corners, edges and joint trims to match ensuring a perfect finish all from one supplier.

Features and benefits of Kavex®'s PVC-UE woodgrain effect shiplap cladding.

- ✓ Provides an authentic woodgrain effect.
- ✓ Rot proof
- ✓ Insulating capabilities
- ✓ Easy maintenance
- ✓ Complete range of product finishing trims and accessories
